MONSTER HUNT IN KAZAKHSTAN

Our team medic and photographer told me one day about a memory of his grandpa which is about a creature. When I heard this story, I started to search for news and myths about this creature. After the search, I found a newspaper from 1930 about this creature which is known as Woargle by villagers in Kazakhstan. To find this mysterious creature me Prof. Neslihan and Dr. Recep started a journey.

Our team consists of old soldier and archaeology Prof. Neslihan Katmer and famous photographer and Doctor Recep Taşkın.

There was an ongoing rumour among villagers about a creature which had lived in the forests for 30 years from 1900 to 1930.

According to narrators and our team medic's grandpa this creature has eagle wings which is over 2 meters length, a wolfs head and a bear body. Because of dead bodies with burn scar, it is thought that its tooth as hot as sun.

In 1987, I took my guitar and my partner took his banjo and we went on a journey to find this magnificent creature.

Natural History of Middle Asia

General Information

Kazakhstan is located in Middle Asia. Kazakhstan's most parts are surrounded by deserts and steppes. However, there are also forests in some places in Kazakhstan. Therefore, desert climate type and steppe climate type are seen. In the summer, the weather is hot and dry; in the winter, it is tough. The degrees vary between -20C and 30C.

Flora

Tall grasses, tall and short bushes, reed grasses are found in the area. In Kazakhstan, some agricultural products are grown such as wheat, corn, rice, cotton, oats, potatoes, sugar beets and sunflowers.

Fauna

In regions where deserts and forests are dense, animals such as antelopes, wolves (snow), bears and sables are seen. Also, carp fish and pickerel are seen in rivers and lakes which take place in Kazakhstan. Herring and sturgeon are also found on the Caspian Sea.

Prehistoric Life

Cultures such as Andronovo, Afanasieva, Karasuk were seen between 5000-1200 BC. Human activities started almost 900.000 years ago in Caspian and Balkhash areas.

Ancient History of Middle Asia

Cultural History

The culture of Kazakhstan comes from nomad lifestyle. Cultural lifestyle are generally relating to farming. The culture of Kazakhstan became acquainted with Islam. The official language is Kazakh.

Myths & Legends

There are two myths such as The Lake Burabay (Borovoe) Myth which is about drought, The Legend of "Grove of Dancing Birch Trees" which is about people who turn into white birches because of confusion.

This photo was taken by our photographer Recep Taşkın in the first day of our journey.

Myths & Legends About Woargle

A picture of our creature which is drawn by our old team member Derin Faki.

Corepas Myth

According to this myth; decades ago, a noble man offered massive amount of money for this magnificent creature's fur. This money was as much as a whole village's need for one year. Therefore, a whole village volunteered to hunt this creature. They said goodbyes to their children and took their weapons. Unfortunately days passed but nobody came. After this tragedy their families left this cursed place and nobody came back again.

Fetekdon Legend

According to this legend; decades ago, a war broke out between two nations. This war spread from deserts of Middle East to forests of Middle Asia. Ultimately, it reached to the place where is the habitat of Woargles. One morning, thousands of dead body was found near the habitat of Woargles. Because of this lost, one of the countries had no strength to fight with other country. Owing to this legend, one country still believes that this creature is cursed whereas other country thinks it is sacred.

Life Cycle of Woargle

Breeding

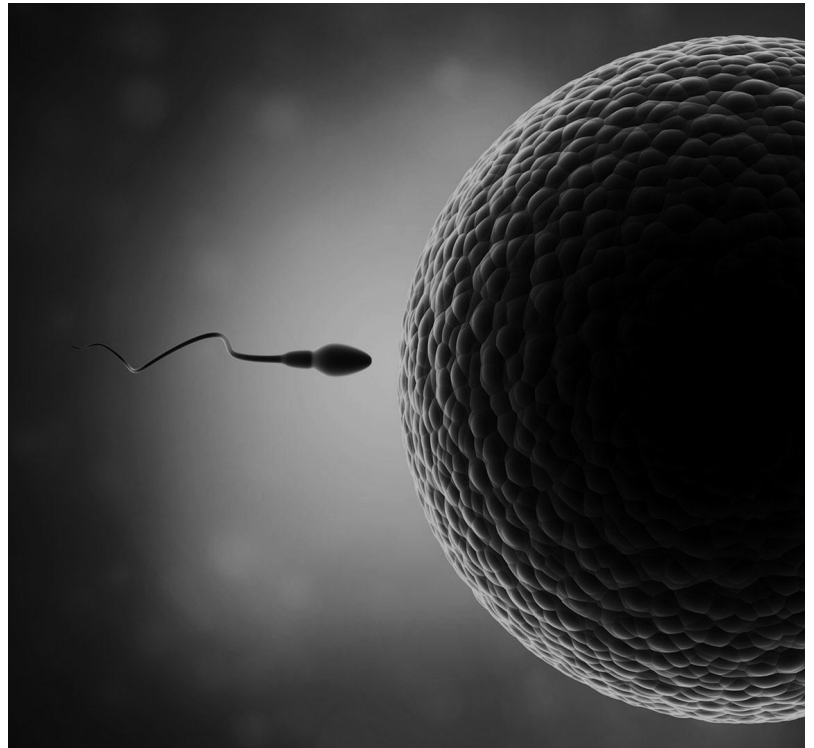

Woargles are mammal. Because of this, they get pregnant and their pregnancy takes 12 months. As soon as they come to the earth, they walk and jump. They feed their offspring with milk for approximately 1 year after their birth.

Youngs

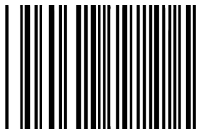

In their early ages, their wings are small and can't carry their body. Also, their body looks like a wolf body. Their body changes in average 3 years. When they reach 4 years old, they leave their family forever. They are carnivorous.

Adult an Old Ages

They live approximately 23 years. They are monogamous. They take care of their offspring almost 4 years. They don't live with a group. As we know, there are no predators which hunt them.

A picture which is taken from a book of Prof. Neslihan Katmer

Anatomy of Woargle

A picture of our creature which is drawn by our old team member Derin Fakı.

Wolf Head

A head of wolf is huge and heavy. Nose of a wolf is too sensitive to smells. It's tooth are so sharp and easily kill a human. Jaws pressure of a wolf is 750 kg. It has noble mane. A woargle eye has special functionality. They can sense the temperatures of their prays with their eyes. However, appearance of their eyes look like an ordinary wolf eye. Woargles can communicate with each other by using a particular frequency which humans and large proportion of animals can't hear.

Eagle Wing

It is so powerful so that it can fly over clouds and there is a lot of feathers having distinct responsibilities. Its feathers lighter than an ordinary bird. Their extent wings provide them ability of flying, despite their body.

Bear Body

A bear body is huge and it has strong and sharp claws. It has dense fur and under the fur there is a thick layer of fat. Despite their weight, they can run in a high pace. A bear can climb in spite of their tremendous body.

Diet of Woargle

Hydration

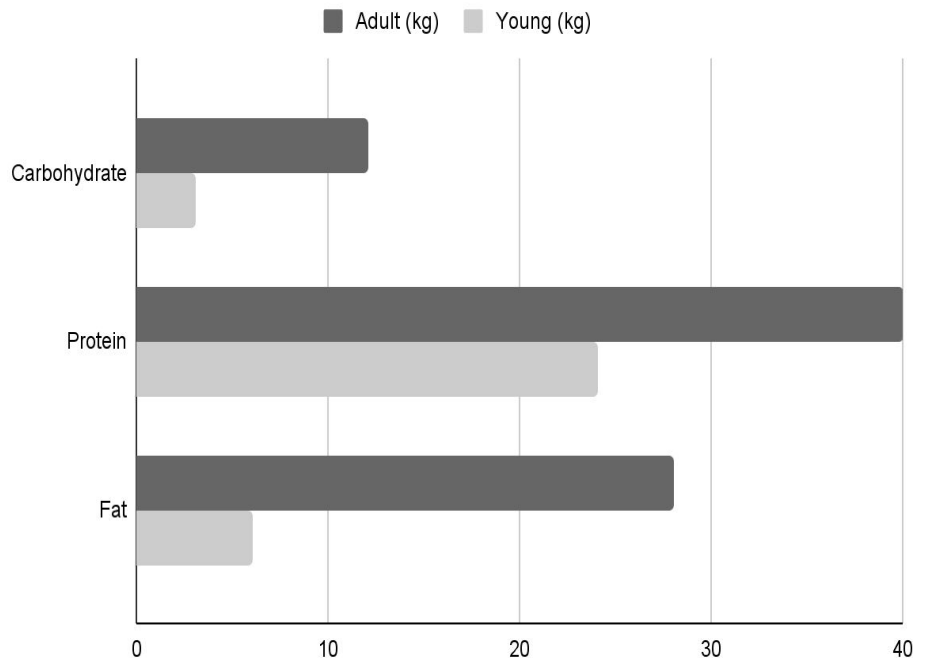

They store fat under their skin and they can use it as a water source. They consume 12L per a day. They are vulnerable to salty water. Even they can be killed by salty water.

Feeding

They are carnivorous. Their sequence of needs is that: protein, fat and carbohydrate. Hence, they hunt herbivorous living in the habitat of woargles.

Hunting

They are hunting by using their wings and jaws. But they have to hurry because they can't fly for long distances.

WALLACE NEWS

1930 MONDAY, MAY 26 08:00-10:00 PM

INNOCENCE VILLAGER WITNESSES A MYSTERY

A creature has been seen around Laost by a villager whose name is Akvalarok. According to Akvalarok, he went the forest to collect woods at night although He was scared of a creature which villagers called as Woargle. While he was collecting woods, he heard a noise and looked around. It was a scream of an animal which is prey of a lying creature as big as a bear.

There was an ongoing rumour among villagers about a creture which had lived in the forests for 30 years. Until now, nobody saw it. According to rumor, it had a wolf head, bear body and a pair of eagle wings. In 1918, a group of researchers cam here to find this mysterious creature but they didn't return. Not returning back, they were searched and their bodies were found by villagers on the mountain, which made villagers believe it has wings. After this terrible case, no researcher dared to investigate this creature.

Woargles in Newspapers

We started our journey after seeing a report in 1930 printing of Wallace News (Fantastic Beasts Edition). This report is the only written source about Woargle. We can see a villager who is grandfather of our photographer.

We found the guy being in newspaper and made an interview with him. He mentioned things which Wallace News hadn't wanted to publish. According to rumors he talked about, one day this creature was trained by a serial killer and he killed so many people by using this cruel monster. Even he killed the leader of Afghanistan Habibullah Han in a hunting trip in 1919.

When this newspaper was published, it didn't make any excitement. 18 years later, a group of hunter were disappeared and their dead bodies were found. There were scarce in their bodies like the other group mentioned in the newspaper. After that, a famous journalist made a broadcast and this creature gained popularity among monster hunters and academicians. However, after the death of a famous monster hunter, nobody can dared to go this area to find this creature. UNTIL NOW...

Woargles in Books and Movies

There is only one book about woargles. Its name is Woargle Hunter and it was written by famous author, revolutionary, academician and minister Sir Premendovic. This superior man is dead after this book published in 1940 and this is a real mystery. Book reflects the real rumours about woargles. In 1962, an incident happened in the habitat of woargles and this was almost same with book. An old man was killed by a creature while he was with his granddaughter. This old man was a famous hunter. Little girl was escaped but she hardly remembered what creature looked like. Years later she became a hunter like her only relative but this is the last thing we know about this girl. This plot was almost same with book and this still remains as a mystery.

Again, there is only one movie which is published in 1953 about woargles but thai movie is not about real rumours directly. This was only an adaptation of book and it didn't made any excitement. It was a low budget adaptation.

Expedition of Woargle

Roles

Prof. Neslihan is our tracker, leader and a soldier. She is founder of this monster hunter team.

Doctor Recep is our medic staff and our photographer. Also he is our publisher. He is so sexy and handsome and every women like him.

Derin is a painter who is unskilled, unsuccessful and need money. She is with us because we saw and pitied her in beginning of our journey but she scared and betrayed us.

Objectives and Challenges

Our first objective is whether this creature is real and if it is real, we want to find a proof by taking a photo of it.

Our first challenge we were betrayed by Derin and we stayed for two. Another challenge is Recep is not skilled as I thought before.

Preparation and Plannings

We searched information for creature and old soldier Prof. Nesli gave us lessons to teach using weapons. We took some fundamental things with us. Our publisher gave permission us to use his own flight. Derin taught us how to speak Kazakh.

Dangerous and Exciting Things

Actually, we thought this creature wasn't real and we tried to proof that it is not real. However, the most dangerous and exciting event is definitely is finding and seeing a flesh and blood woargle. Death of our photographer and coming back of our painter were most exciting events.

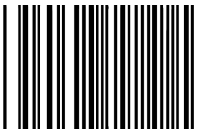

Summarize

First, we were betrayed by Derin. When we found the beast, Recep tried to seduce it by using his charm. But he didn't know that it was a male woargle and he couldn't attract it. Despite all my efforts, I couldn't manage to save him and he died in front of me. He wasn't skilled as I thought and he wasn't sexy as he thought. After that, I thought I can't find this on my own and i tried to escape from forest. While I was trying to escape monster found me. I tried to escape but I couldn't make it. When I thought that I'm in the end Derin came and saved me. She wasn't unskilled as I thought before.

Conclusion

In the end, we found the creature but we couldn't find any proof because our proofs died with our photographer but, if you are curious, don't wait. Take a trip, find it. It's out there somewhere in the woods. Waiting...

Florida Sea Monster Quest

In the final explorations, scientists have found some traces left behind in which only something massive can. Research team have skilled scientist known by their achievements. The main idea was to find new life traces in the bottom of the undiscovered deep sea but it turned out unexpectedly.

The skull you see in the picture doesn't belong to the Hydragon itself. It is something else's skull as its anatomy doesn't look like a dragon's skull, it actually looks like an octopus skull but a massive one and the only thing that can kill this kind of big creature must be a bigger one. This brings to mind the legendary Hydragon.

Natural History

Hydragon lives in the sea generally but it can also live in the land. However, due to its size, it is really hard to hide or accommodate in the land.

Besides Hydragon there are lots of other species such as massive octopus, megaladon. Hydragon eats anything you can imagine in the sea. He needs to eat more than 10000 k.g of meat. The only way it can do it by other big creatures that has been mentioned. In the vikings Lore, Hydragon was one of the most feared creature. Due to vikings it has been known to seen in the iceland.

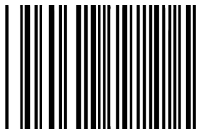

celand is geologically quite young, and mostly formed from volcanic processes, so fossils there are rare. The oldest fossils found in Iceland are from the Miocen and are plant remains. Miocene and Pliocene fossil sites are found mainly in the West of Iceland and the Westfjords. Remains of invertebrates have been found In Ice age strata, especially in fresh water and marine sediments. It is rare to find fossil remains of land animals in Iceland, although remains of deer bones have been found.

Ancient History

Hydragon is a popular creature in Scandinavian Mythology. He has a different name on that culture but its body and description is same with the creature from the myths. It is believed that it got destroyed by Thor but it is one of the biggest reasons that caused Ragnarok. It attacked a lot of worlds from Nine Realms and he was the biggest treat of a realm around the sea.

Proin id sapien at elit porttitor dapibus interdum gravida quam, vulputate elit fermentum sed tempor libero ac consequat aliquam.

The Creature Myth & Legend

Ac vulputate elit fermentum ac. Sed tempor libero ac consequat aliquam.

It is believed that this creature is from ancient mythologies. It is closely related to Anglo-Saxon mythology and Continental Germanic mythology. There are Nine Realms in Norse mythology; Asgard, the land of the Gods where Odin rules, Midgard, the land of men, Vanaheim, the land of the Vanirs, Jotunheim, the land of giants, Niflheim, the land of ice, Muspelheim, the land of fire, Alfheim, the land of the elves, Nidavellir, the land of the dwarves, Helheim, the land of the dead.

It lives both in the ocean and on the land

Its body anatomy and movements in the sea resemble an eel when swimming and a shark when attacking its prey. What makes such a large creature easy to hunt is its ability to move extremely fast (close to lightspeed) and become invisible like a chameleon. Its body is covered with scales. The pigments found in the chameleon's skin are in its scales, and the bottom of its scales are guanine crystal cells. It uses its color changing ability to hunt. He smells blood like sharks. Attack agility is similar to sharks. While swimming, it swims by waving its tail, that is, like an eel, and when attacking, it moves by combining its wings with its body and bending the water under itself. The skeletal and spinal structure is like eels. It is very silent when attacking and completes its job without its prey noticing it. The way it hunts in the air is like an eagle and it speeds like a peregrine falcon. The wing anatomy is similar to flying dinosaurs, not birds. Because it is so large and to preserve its predator identity, it prefers to glide rather than flap its wings while flying. It is rarely seen on land. Also he can manipulate elements especially lightning, air and water. Its skin is tougher than carbon fiber alloys.

Sed tempor libero ac consequat aliquam.

BEASTS & CRYPTIDS

BILKENT, ANKARA

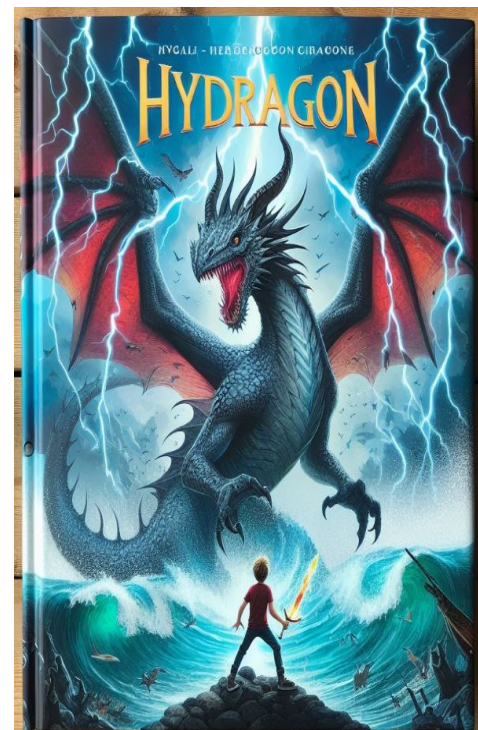

The Sunday Sun reporting on a sighting of the Istanbul Sea Monster

Hydragon in Books

Most famous book about Hydragon is a novel named "Hydragon." It is about a boy called Ata Saygılı and his adventure against Hydragon. It is an mythological hero story

Ata is a child who is different and excluded from his friends. He has unprecedented abilities that no one understands. He constantly feels called by something in the sea. The young man finds himself in an adventure he never expected when he learns that Hydragon, the most powerful creature in mythology that has not been seen for years, is real and that the reason for his special powers is his missing father, Poseidon.

Vestibulum sem orci, molestie nec laoreet

Expedition for the Hydragon

Objectives and Challenges:

Finding and Proving that Hydragon real creature and a real threat

Preparation and Planning:

Contacting with Navy and demanding help and equipment.

The Journey Begins: Fear of death and deep sea creatures besides of Hydragon

The Dangerous Encounters:

Facing big waves, earthquakes and heavy lightning bolts

Conclusion: We saw the creature but we couldn't do anything to this enormous monster

after deciding to find the dragon and tackle the issue, we tried to contact with the Navy to ask for equipment and help. In the beginning of the journey everyone was afraid and scared what will they find. Specialists were expecting to encounter heavy storms and earthquakes. Afterwhile marines and soldiers manage to locate the thing but they couldn't do any harm to this enormous creature.

Mitava Monster Quest

Our exploration team has received an informing about a creature. According to this informing; a huge, white creature has been seen around Canada. People who saw the monster claim this monster must be the one that in the Mitava legends stories. Because the creature perfectly fits the definition of the Mitava that told by people.

Based on legends, Mitava is a creature living in the land only in summers. It hunts there. Then it goes back to the seas. This summer it has been seen for the first time. So, we decided to conduct our researches in the North America. Our research team members : Elif Coşkun and Hatice Sümeyye Bayrakdar

Natural History

Tundra ecosystem has extremely cold weather conditions due it being situated at high altitudes and places like Siberia, North Canada, Alaska, South Gronland, South Argentina ,Chile that gets sunlight at oblique angles. The climate has basic features such as low rain percentage, strong winds, low temperature. Furthermore the soil is frozen in most of the year and it lacks minerals so there is low flora diversity. Trees are not common in Tundra ecosystems. Mostly it consists of low growing plants such as,Caribou Moss,Arctic Willow,Labrador Tea, Cotton Grass etc.Due to hard weather conditions this ecosystem has a mediocre biodiversity. To exemplify, reindeer,musk ox,Arctic hare,polar bear,Arctic fox , caribou,snowy owl are some of the animals that live their.

Ancient History

Generally Eskimos remain tundra ecosystem places. They have been hunter-gatherer societies. Moreover they do fishing and they wear fur from the animals that they have hunted.

They have also some myths. For example, in Inuit mythology, a creature which is named the Qallupilluit, lives along the Arctic shorelines. This creature is said to kidnap children who are passing close to the sea.

The Creature Myth & Legend

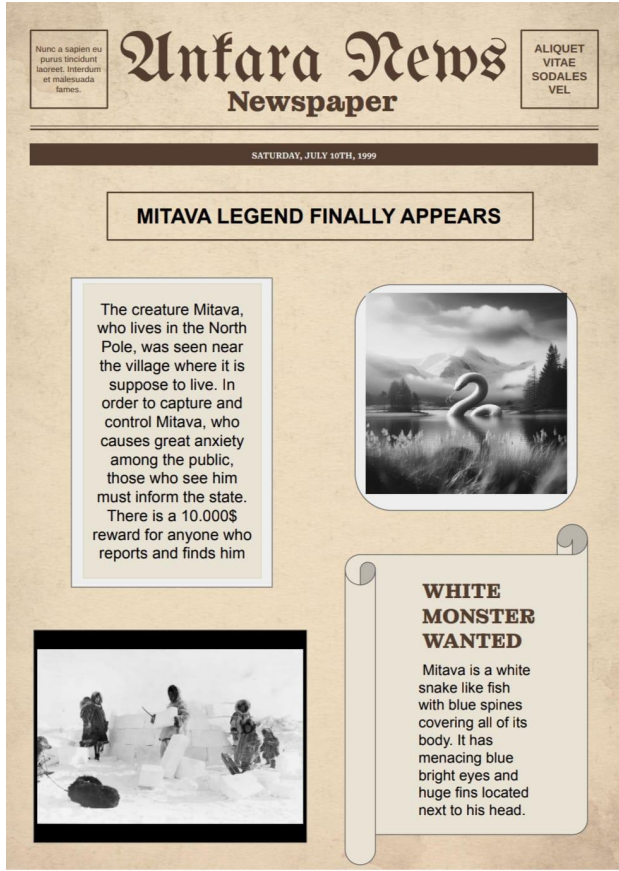

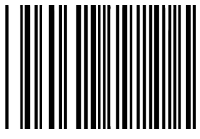

The creature Mitava, lives in cold seas near the Tundra ecosystems. This creature is a white snake-like fish with blue spines covering all of its body. It has menacing blue bright eyes and with its huge fins located next to its head. It can swim very fast and it can slightly fly above the sea. These fins also have another feature, which they can accelerate the creature while moving on land.

It lives both on the land and in the marine

This creature is seasonal. When the weather is appropriate on land, when its summer, it leaves the sea and when the weather gets cold it dives back into the ocean. It is a predator and its prey are occasionally herbivorous animals, when it is on land, and fishes in the seas.

Due to its white color in the sea it looks blueish so it is hard to spot it as a predator. Because of Mitava's snake head anatomy it can eat big preys easily such as musk ox. With its huge fins and big tail it can move very fast underwater and on the land.

MITAVA IN NEWSPAPER REPORTS

Everything has started with establishment of the Unfara Newspaper which is shown on the left. Then the creature reports have increased sharply. Then the Canadian popular newspapers such as Toronto Star and National Post have established news about Mitava. Hunting adverts, which promising people money prize, have encouraged native people to hunt Mitava. However, nobody can accomplish to catch Mitava monster.

Mitava in Books & Films

The White Nightmare-Stephen King (1975)

The book is about an Eskimo's adventures Qilaq the Eskimo lives alone. The life of Eskimo changes when he sees the existence of a monster. He should hide or beat the monster somehow.

When this book was written, there was no proof about the existence of monster. Then the monster has been seen in the news. This situation attracted the attention to the book.

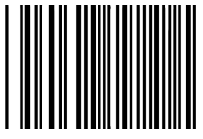

The White Monster-Steven Spielberg (2000)

This film is adapted from Stephen King's "The White Nightmare" book. The same story but Spielberg has a little bit changed the story due to the reality of the news.

Nameless Eskimo Folk Songs

There are a couple of songs among Eskimo people. These songs have been transferred from generations to generations.

Expedition for the Mitava Monster

Objectives and Challenges: Obviously, there were plenty of challenges both during travel and research stages. But our fearless team members deal with the problems. For example the weather was extremely cold. Besides it was a scary experience as we were chasing a huge monster.

Preparation and Planning: We knew that the conditions were very harsh. Hence, we were well prepared. We had to change our eating habits since there weren't diversity of food supply on Tundra region. We wore animal furs. And we went through a hard physical training. And we take some psychology lesson

H. Sümeyye Bayrakdar:
Zoologist who specialize on cold climate animals.

Elif Coşkun: Genetics engineer, photographer

Conclusion: We found the Mitava monster and took some photos. We took its DNA sample. Experiment still continues.

People hope that they will be saved soon. We are doing our best to help.

VOLCANO WHALE EXPEDITION

Our investigation team track a legend been told generation by generation known as volcano whale in Caucasus Mountains . Despite there haven't been any volcanic existent in the region myth explorers have been wondering why such a legend is ubiquitous in every kind of antique myths. An investigation team constructed by four brave explorers itinerate to the source of the legend and then this exploration data will be combined according to this last exploration journey

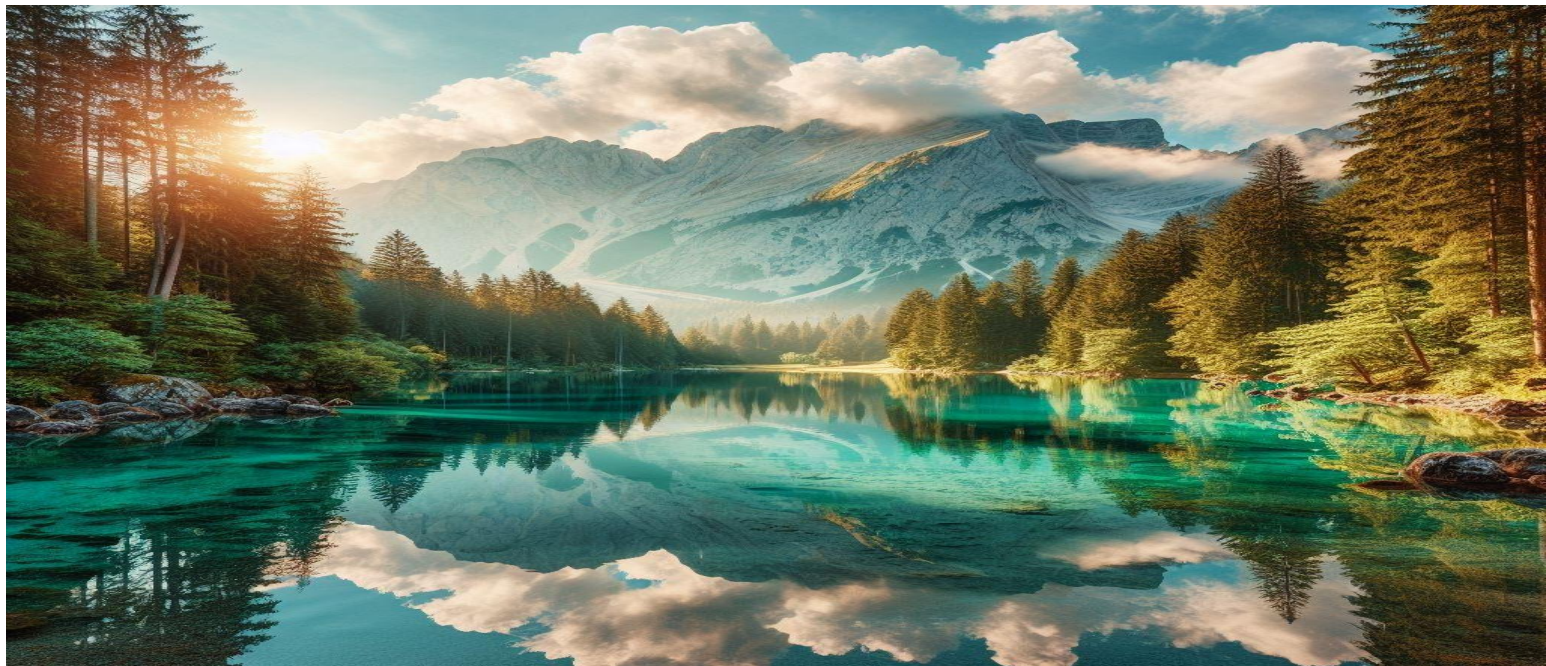

Natural History

If we talk about natural history, the habitat where the volcano whale lived was a brutal sea full of volcano beds in ancient times, but the increase in the number of volcano whales increased the evaporation in the sea and with the land events, the connections of this sea with other seas were broken and with the evaporation, this point of the sea became isolated and turned into a lake. Although whales have been found, the fossil parts of most of them are very unclear and in poor condition because they failed while trying to pass from underground water lines to other seas and the high pressure there damaged the structure of their bodies. While of course studies are still ongoing in the past, it is thought that the volcano whale also walked on land for a while, especially male volcano whales. Since they do not swim at the moment, but rather grow on the seabed, they can sometimes be seen on the shores. Scientists say that this majestic creature was much more agile in its development process, and it is true that they were sometimes even seen on the top of the mountains. This is the only evidence of its fossils found in the Caucasus mountains.

Ancient History

The majestic volcano whale has attracted the attention of people for centuries. It managed to surprise everyone with its interesting appearance and conquered people's hearts with its docileness. This animal is thought to be the guardian of the gates of heaven for the ancient Astecs, and is also thought to be connected to ancient Egypt. Just as there is a dragon in every culture, there is also a volcano whale. Of course, volcano whales still exist.

MYTHS ABOUT AY-KHOOL REGION

Natives around Ay-Khool Lake believes that if volcano whale ever come to Ay-Khool Lake, Ağrı Mountain it means that it is end of human living. Natives do traditional rituel every year to not see volcano whale. In that rituel people throw rocks to the lake.

EVOLUTION OF VOLCANO WHALE

Volcano whales have a very old evolutionary process. This long evolutionary process started with a blue whale living near underwater volcanoes. According to scientists, these whales, which have high CO₂ and ash content, as well as swimming at very high temperatures, have undergone serious mutations. The breaking of the threshold occurred when a volcano erupted and lava and volcanic rocks fell into the whale's womb. This material created an energy equivalent to a nuclear bomb for the embryo, and this proces gave birth to the whale. Whales are normally mammals, but since the hard rock and hot skin of a volcano whale is very dangerous for internal development, over the years, a volcano whale begins to lay eggs, just like a platypus, and they lay their eggs in the volcano on the male's back, just like a frog. Our eggs on the hot volcanic back of the male are mixed there long enough. If they remain without falling, the male slips and falls to the sea floor, they become a female volcano whale. This gender selection was first seen by scientists in the amphibian class.

VOLCANO WHALE IN NEWSPAPERS

There are some mystreious news in Newspaper, BBC, CNN, New York Times, Bulletin about volcano whale. Such as connection of creation of Egyptian Pyramids.

Daily Bugle's reporters says that some local people have found evidence of the volcano whale's existence.

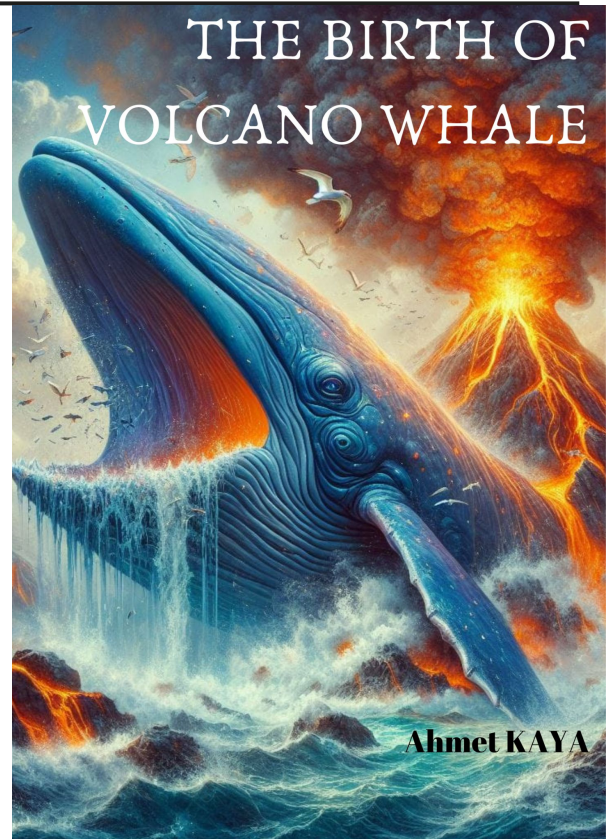

even there is a rumour that says ancient people saw the volcano whale and became stones

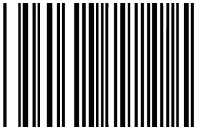

The Sunday Sun reporting on a sighting of the Istanbul Sea Monster

VOLCANO WHALE IN BOOKS

Volcano Whale has been mentioned in lots of books and movies. There are myths and legends about how it borned and "THE BIRTH OF VOLCANO WHALE" is most famous and important one. This book explains creation and evolution of Volcano Whale.

Writer of this book, Ahmet Kaya, also has a song called "Doruklara Sevdalandım" about Volcano Whale

VOLCANO WHALE EXPEDITION

There is a quote from travel book, a traveller tried to find volcano whale and some evidences of volcano whale. He wrote this book to hand it down to next generations.

At the end of the last exploration journey of senior investigators 'Eyüp Demir Kaya', 'Asım Peksen', Mehmet Mahir Şahin and 'Yadim Ete Yabiri' some intrinsic premonitions and a possible ex-habitat intended for "Volcano Whale" were brought to light. Investigators took their aim at the source from where the legend of "Volcano Whale" spreaded to the world.

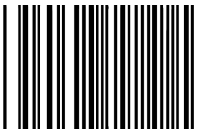

The journey was very difficult and the investigators had numbers of times thought to end up the discovery but thanks to the efforts of "Journey Chief Mehmet Mahir Şahin" this attempt attained to be completed. "Müdenay Village" in "Dagestan Region" was the beginning point of this journey and the same youth from "Çöğür Bekir" family had assisted our investigators during the journey.

At the first time villagers have encountered with the investigators they were quite sceptical about extricating their sacred secrets to outsiders being loyal to their ancestors. Because of the endeavouring of investigation team, villagers were persuaded to assist the discovery.

some pictures from travel book.

Lumifinix Monster Quest

Our search team has received a report of a creature. According to this report, a huge, white lion-like creature has been seen around Siberia. People who have seen the creature claim that this creature is the creature of Viking legends. Because the creature exactly matches the description of the lumifinix monster described by people. According to legends, lumifinix is a creature that lives on land only in winter. It hunts there. It was seen for the first time this winter. So we decided to do our research in Siberia.

Natural History

The polar environment is one of the most fascinating and challenging regions on Earth. It's a place of extremes, where the temperature can drop to -50°C or lower, and the sun doesn't rise or set for months at a time. Despite the harsh conditions, the polar regions are home to a unique and diverse range of wildlife, including polar bears, penguins, walruses, and seals. The polar ecosystem is also home to a rich diversity of plant life, which play a critical role in the ecosystem by providing food and shelter for other organisms. Additionally, the polar regions are home to a variety of marine organisms, such as krill, phytoplankton, and fish, which form the base of the food chain and provide a vital source of food for larger predators.

Ancient History

There is a legend about Anibus. According to ancient Egyptian mythology, he is the god of death. He is the son of Set and Nephthys. The jackal-headed Anubis is associated with death because jackals roam around the graves.

Arctic climate is the type of climate seen in the polar regions of the Earth, which are permanently covered with snow and ice. It is effective around the North Pole, in the interior of Greenland Island and Antarctica.

Proin id sapien at elit porttitor dapibus interdum gravida quam, vulputate elit fermentum sed tempor libero ac consequat aliquam.

The Creature Myth & Legend

Our creature lives the pole. This is outcome of their preference cold temperature. Their coats are yellow-gold and manes that range in color from blond to brown to black. The most striking characteristic of features are their mane and the species most noticeable attribute.

LIFE CYCLE OF LUMIFINIX

BIRTH

A baby lumifinix is called a "pup." At birth, it is pink, naked and blind. A pup is completely defenseless and reliant on his mother. In approximately a week, he will begin to grow fur and teeth.

ADOLESCENCE

Since they only live a few years, adolescence comes quickly. They reach sexual maturity between the ages of 4 to 6 weeks, and males generally mature faster than females.

ADULT

They moms can get pregnant again within 24 hours of giving birth, so unless you are breeding them, it's wise to separate the parents as soon as the pups are born.

SHOCKING NEWS IN EGYPTIAN PYRAMIDS

The flood period of the Nile River and the mating period of the volcano whales overlap, so a young volcano whale entering the rising Nile River went as far as the pyramids.

This brings one question to mind:

Did people in ancient Egypt use this mystical animal in the construction of the pyramids because, as can be seen from the ruins found by archaeologists, there are pictures of volcano whales inside the pyramids.

Lack of lions in the pole !!!

No there are no sea lions that live on the continent of Antarctica although the Hooker's sea lion does live on some relatively nearby sub-Antarctic islands such a Macquarie Island. No sea lions venture into past the relatively warm waters north of the Southern Ocean.

It is a monster of epic proportions LUMIFINIX!

All living things are afraid of these creatures. When the sun sets, they begin to hunt other creatures, even animals that are larger than themselves, and they have the ability to easily hunt even animals that are larger than themselves.

LUMINIFINIX IN NEWSPAPER REPORTS

This creature has been featured in the most famous newspapers of Chile, where it is mentioned that it hunts other creatures for lack of lions.

Some people in the Siberian region claim to have seen the luminixi, but there is no conclusive evidence, these people say that they saw a lion-like creature with a hamster head and this creature identifies the lumifinix.

The Sunday Sun reporting on a sighting of the Istanbul Sea Monster

Luminifinix in Books & Films

He is very shy however, he wants to be a real lion and a hero.

“A Shy Hero” It is about a shy hamster ho wants to be a hero. Ryan Gosling, Emma Stone, Tobey Maguire.

“The Magic Forest”

“I want to be a hero” by The Weeknd

Vestibulum sem orci, molestie nec laoreet

Expedition for the Hamster Lion

We explored the Chile Forests. We saw his footprints which was very small. We tracked the footprints. Finally, we saw him but he was very shy and he ran away

Eren: The pilot, he drove the plane from Turkey to Chile

Esra: She is an expert of tracking and she found out his footsteps

Ergin: He is an expert of the forests, we survived to live in the forests thanks to him.

Objectives and Challenges:

Our goal was to see "hamster lion". Eren wanted to eat a poisonous mushroom but Ergin warned him so he didn't eat it.

Preparation and Planning: We prepared for hiking in the forests also, we trained to not scare the hamster lion. Eren trained to drive a plane, Esra trained about footsteps tracking and Ergin learned about forests.

The Journey Begins: We are fans of the hamster lion so we were so exited. This caused some mistakes.

The Dangerous Encounters:

Eren tried to eat a poisonous mushroom, Ergin tried to fight with a forest bear but we said him to tun away.

Photographs and Visuals:

Include photographs/ illustrations

Conclusion: Yes we found him but he ran away after he had seen us however, it was worth it.

We found out that the Hamster lion (Luminifinix) is real and we were rewarded by Hollywood for proving the reality of a movie hero. It was a great honour.
